Crystal Pay: Clean Data, Clear Financial Decisions

Project Domain

Excel, Power BI, and Chatbot with Copilot Studio

PROJECT IMPLEMENTATION

BY:

Student Name: Srijoni Gupta

Student Email: srijoni.gupta@gmail.com

Guide Name: Umamaheswari

Faculty Name: Sagar Chetan Mehta

Institution: UMESCHANDRA COLLEGE

Year : 2026

1.Data Upload and Preparation

Dataset Source: Payroll records stored in Excel **(Crystal Pay Clean Data, Clear Financial Decisions DATASET.xlsx).**

Upload Process:

- Imported the dataset into Microsoft Excel.
- Verified field structure: Employee ID, Department, Designation, Salary Components (Basic Pay, Allowances, Overtime, Bonuses, Deductions), Gross Salary, Net Salary, and Pay Month.
- Ensured column headers were standardized for consistency.

1. Data Cleaning Workflow

Duplicate Removal
Used Excel functions (Remove Duplicates, COUNTIF) to validate unique Employee IDs.

Standardization:

- Normalized department names (e.g., “HR” vs “Human Resources”).
- Applied consistent formatting for pay month entries.

Validation Rules:

- Checked numeric consistency in salary fields (no text or invalid entries).
- Applied formulas:
- Gross Salary = Basic Pay + Allowances + Overtime Amount + Bonuses
- Net Salary = Gross Salary – Deductions
- Flagged anomalies such as deductions exceeding gross salary or negative values.

Error Handling:

- Corrected outliers (e.g., excessive bonuses, invalid overtime hours).
- Documented all changes in a validation summary.

2. Data Processing and Analysis

- **Excel Techniques:**
  - Pivot Tables for department-wise salary distribution.
  - Conditional Formatting to highlight anomalies.
  - Lookup Functions (VLOOKUP, INDEX-MATCH) for cross-checking employee records.

KPI Framework:

- Total Payroll Cost
- Average Salary per Department
- Deduction Ratios
- Overtime Cost Percentage
- Bonus Share of Payroll
- Payroll Growth Rate

3. Visualization and Dashboards

Interactive Dashboards:

- Department-wise salary distribution charts.
- Overtime and deduction trend graphs.

- KPI summary tables for quick insights.

Copilot Assistance:

- Natural language prompts used to generate summaries and anomaly detection.
- Automated chart creation and narrative insights for stakeholder-ready reports.

4.Power BI Dashboards

Organized into four clear pages for stakeholder navigation:

- **Overview:** Executive snapshot of payroll health (Gross vs Net Salary, Overtime, Bonuses, Deductions).
- **Departments:** Comparative insights across HR, Finance, IT, and Sales.
- **Drivers:** Key influencers analysis showing what impacts overtime and bonuses.
- **Breakdown:** Detailed departmental compensation structures with gauges, donuts, and line charts.
- **Impact:** Stakeholders can move from high-level summaries to deep departmental breakdowns seamlessly.

5.Chatbot Integration (Copilot Studio)

Chatbot Design:

- Built in Copilot Studio to interact with payroll data.
- Flow architecture included:
- **Salary Breakdown Flow:** Employee-wise salary details.
- **Department Insights Flow:** Average salary, overtime, and deductions by department.

- **Overtime & Bonus Flow:** Trends and anomalies in incentive structures.

- **Data Cleaning Flow:** Automated validation checks with error-handling messages.

Capabilities:

- Answers payroll queries conversationally (e.g., “Show me overtime trends in Finance”).
- Provides department-specific salary insights.
- Supports decision-making with real-time responses.
- Professional messaging, error handling, and branching logic ensure smooth interactions.

User Experience:

- Professional, conversational messaging style.

- Error-handling prompts for invalid queries.

- Quick access to KPI summaries and dashboards via chatbot responses.

6. Final Output

- **Validated Dataset:** Clean, error-free payroll records.

- **Dashboards:** Transparent visualization of workforce costs and payroll trends.

- **Chatbot:** AI-powered assistant providing real-time payroll insights, anomaly detection, and decision-support for HR and Finance teams.

- ensuring compliance and audit readiness.

7. Future Enhancements

While Crystal Pay currently delivers clean payroll data, transparent dashboards, and chatbot-driven insights, several opportunities exist to expand its impact:

1. **Advanced Analytics Integration**

Implement forecasting models to project salary growth, overtime trends, and bonus allocations.

2. **Expanded Chatbot Capabilities**

- Add compliance and audit flows to automatically flag irregularities against HR policies.
- Enable multilingual support for diverse workforce communication.
- Incorporate employee self-service queries (e.g., “Show my last three pay slips”).

3. **Automation & Scalability**

- Integrate with HRMS/ERP systems for real-time payroll updates.
- Automate monthly payroll validation checks to reduce manual intervention.
- Scale chatbot flows to handle larger datasets across multiple departments.

4. **User Experience Enhancements**

- Personalize dashboards with role-based access (HR, Finance, Management).
- Provide mobile-friendly chatbot interfaces for on-the-go payroll insights.
- Introduce voice-enabled queries for faster interaction.

5. **Security & Compliance**

- Implement role-based authentication to protect sensitive payroll data.
- Add audit logs for every chatbot query and dashboard view.
- Ensure compliance with evolving labor and data protection regulations.

8. Benefits

- **Transparency:** Clear salary and overtime trends across years and departments.
- **Efficiency:** Automated insights reduce manual payroll analysis.
- **Accessibility:** Chatbot makes financial data conversational and easy to query.
- **Scalability:** Framework supports expansion into bonuses, overtime flows, and KPI dashboards.

9. Conclusion

Crystal Pay now stands as a comprehensive payroll intelligence solution combining clean data, interactive dashboards, and an AI-powered chatbot. This implementation empowers organizations to make clear, confident, and data-driven financial decisions.
